

# NEWBORN AIRWAY MANAGEMENT

TASK TRAINER | C0009

OUR NEWBORN AIRWAY MANAGEMENT TASK TRAINER IS A PRACTICAL AND AFFORDABLE SOLUTION FOR TEACHING AND PRACTISING INTUBATION. THE MODEL REPRESENTS A FULL-TERM NEWBORN AND ALLOWS FOR 9 CM OF ENDOTRACHEAL TUBE INSERTION TO ACHIEVE MID-TRACHEA PLACEMENT.

THE AIRWAY IS BOTH REALISTIC AND FUNCTIONAL, FEATURING AN INFLATABLE CHEST AND THE ABILITY TO OBSERVE RIGHT MAINSTEM INTUBATION WHEN IT OCCURS — HELPING LEARNERS RECOGNISE AND CORRECT THE ERROR. THE TONGUE IS SOFT AND FLEXIBLE, AND THE EPIGLOTTIS HAS A REALISTIC OMEGA SHAPE. VOCAL CORDS ARE VISIBLE WITHOUT APPLYING DOWNWARD PRESSURE ON THE HEAD — THE FORCES ARE CALIBRATED TO REFLECT REAL-LIFE CONDITIONS.

THE MODEL IS FULLY MODULAR, WITH EACH PART EASILY REPLACEABLE IN SECONDS.

IT'S ONE OF THE MOST REALISTIC NEWBORN AIRWAY TRAINERS AVAILABLE, WITHOUT THE HIGH PRICE TAG.
